

CANADA IS BUILDING UP ITS CAPABILITIES FOR A MORE DANGEROUS WORLD

Looking ahead, the Canadian Armed Forces is investing in the future—modernizing its forces, advancing capabilities in cyber, space, and intelligence, and deepening interoperability with our closest allies. These efforts ensure that **Canada remains a reliable, agile, and forward-looking partner in an increasingly complex security environment:**

- **Early warning.** Arctic Over-the-Horizon radar, space-based sensors, and airborne early-warning aircraft that track threats.
- **Missiles & air defense.** 26 U.S.-built HIMARS launchers firing precision missiles more than 185 miles, long-range strike missiles for Canada's fighter jets, and new ground-based air defenses to shoot down incoming threats.
- **Aircraft & drones.** P-8A Poseidon submarine hunters and MQ-9B long-range surveillance drones are on order, contracts that grow the military's drone fleet tenfold, with capacity to build millions within two years.
- **Ships & submarines.** Up to 12 stealth submarines that can patrol the Arctic, River-class Destroyers built around the U.S. Aegis combat system, and two new polar icebreakers.
- **Ammo & military members.** Investment in ammunition facilities in Canada, procuring millions of rounds, and increased recruitment and salaries for servicemembers to grow numbers.

Canadian defense companies are developing new tools to be part of the solution

New sensors, missiles, aircraft, and ships will help Canada detect and stop threats before they reach our shores. From C4ISR, armored vehicles and cyber, to munitions, and unmanned systems, Canadian companies are agile, innovative, and battle-tested.

Canada is leading the way on America's icebreakers

Currently, the U.S. Coast Guard has two working icebreakers, while others including adversaries have more than 40. In partnership under the ICE Pact with the United States and Finland, Canada contributes the world's second-largest icebreaking fleet, new design for the ships, and the shipyards that build them.

- Davie, a Canadian shipbuilding firm, has invested \$1 billion in its 'American Icebreaker Factory,' supporting up to 2,000 U.S. jobs.
- 5 of the 11 new U.S. Coast Guard Arctic Security Cutters are being built by Davie.
- 3 Cutters are being built in Galveston and Port Arthur, Texas.

Partnerships between our industrial bases benefit communities and our shared defense.

In an unstable world, a strong Canadian military partner keeps us safe at home and supports missions abroad.
